

## Easy Ring Sizing Guide

Below is a quick method for measuring your own ring size. For best results, we recommend asking your US ring size from a jeweller first.

## What you'll need

- String or Floss
- Pen
- Ruler

1) Wrap the paper or string around the desired finger below the knuckle

Tip: Remember to keep the string as straight

as possible to make sure the ring is not
oversized
2) Mark the overlap point with a pen

3) Use a ruler to measure the distance between the marks in millimetres

4) Refer to the guide below to find our ring size.

# Ring and Chain Sizer 

HOW TO DETERMINE YOUR RING SIZE
All our ring sizes are measured in European Standards. In order to determine your ring size you can use one of the following 2 methods:

## 1. Do you have a perfectly fitting ring at hand?

Great! Let's measure your ring size by diameter. All you need is a ruler and your ring that fits you well. Now measure the INSIDE diameter (in mm) of your ring.
Lastly you can convert your diameter to the corresponding European ring size
using the chart below. If you are between two ring sizes choose the larger

2. No ring at hand?

No problem! Measure your ring size by circumference.
All you need is a piece of string, a ruler and a marker pen.
Start by encircling your finger with the piece of string.
It shouldn't be too tight and neither too loose.
With a pen mark where the string overlaps.
Now measure the string with a ruler.
The measurement obtained is the circumference of your finger.
Lastly you can convert your circumference to the corresponding European ring
size using the table below. If you are between two ring sizes choose the larger one.

Use the table to convert the circumference or diameter in European Size.
